

**Table 5.1 Process Interaction**

<b>Degree of Awareness</b>	<b>Relationship</b>	<b>Influence that one Process has on the Other</b>	<b>Potential Control Problems</b>
Processes unaware of each other	Competition	<ul style="list-style-type: none"> <li>•Results of one process independent of the action of others</li> <li>•Timing of process may be affected</li> </ul>	<ul style="list-style-type: none"> <li>•Mutual exclusion</li> <li>•Deadlock (renewable resource)</li> <li>•Starvation</li> </ul>
Processes indirectly aware of each other (e.g., shared object)	Cooperation by sharing	<ul style="list-style-type: none"> <li>•Results of one process may depend on information obtained from others</li> <li>•Timing of process may be affected</li> </ul>	<ul style="list-style-type: none"> <li>•Mutual exclusion</li> <li>•Deadlock (renewable resource)</li> <li>•Starvation</li> <li>•Data coherence</li> </ul>
Processes directly aware of each other (have communication primitives available to them)	Cooperation by communication	<ul style="list-style-type: none"> <li>•Results of one process may depend on information obtained from others</li> <li>•Timing of process may be affected</li> </ul>	<ul style="list-style-type: none"> <li>•Deadlock (consumable resource)</li> <li>•Starvation</li> </ul>

**Table 5.2 Possible Scenario for the Program of Figure 5.12**

	Producer	Consumer	s	n	Delay
1			1	0	0
2	waitB(s)		0	0	0
3	n++		0	1	0
4	if (n==1) (signalB(delay))		0	1	1
5	signalB(s)		1	1	1
6		waitB(delay)	1	1	0
7		waitB(s)	0	1	0
8		n--	0	0	0
9		SignalB(s)	1	0	0
10	waitB(s)		0	0	0
11	n++		0	1	0
12	if (n==1) (signalB(delay))		0	1	1
13	signalB(s)		1	1	1
14		if (n==0) (waitB(delay))	1	1	1
15		waitB(s)	0	1	1
16		n--	0	0	1
17		signalB(s)	1	0	1
18		if (n==0) (waitB(delay))	1	0	0
19		waitB(s)	0	0	0
20		n--	0	-1	0
21		signalB(s)	1	-1	0

Shaded areas represent the critical section controlled by semaphore s.

**Table 5.3 Purpose of Semaphores in Figure 5.19**

<b>Semaphore</b>	<b>Wait Operation</b>	<b>Signal Operation</b>
<i>max_capacity</i>	Customer waits for space to enter shop.	Exiting customer signals customer waiting to enter.
<i>sofa</i>	Customer waits for seat on sofa.	Customer leaving sofa signals customer waiting for sofa.
<i>barber_chair</i>	Customer waits for empty barber chair.	Barber signals when that barber's chair is empty.
<i>cust_ready</i>	Barber waits until a customer is in the chair.	Customer signals barber that customer is in the chair.
<i>finished</i>	Customer waits until his haircut is complete.	Barber signals when done cutting hair of this customer.
<i>leave_b_chair</i>	Barber waits until customer gets up from the chair.	Customer signals barber when customer gets up from chair.
<i>payment</i>	Cashier waits for a customer to pay.	Customer signals cashier that he has paid.
<i>receipt</i>	Customer waits for a receipt for payment.	Cashier signals that payment has been accepted.
<i>coord</i>	Wait for a barber resource to be free to perform either the hair cutting or cashiering function.	Signal that a barber resource is free.

**Table 5.4 Design Characteristics of Message Systems for Interprocessor Communication and Synchronization**

<b>Synchronization</b>	<b>Format</b>
Send	Content
blocking	Length
nonblocking	fixed
Receive	variable
blocking	<b>Queuing Discipline</b>
nonblocking	FIFO
test for arrival	Priority
<b>Addressing</b>	
Direct	
send	
receive	
explicit	
implicit	
Indirect	
static	
dynamic	
ownership	

**Table 5.5 State of the Process Queues for Program of Figure 5.29**

Readers only in the system	<ul style="list-style-type: none"> <li>• <i>wsem</i> set</li> <li>• no queues</li> </ul>
Writers only in the system	<ul style="list-style-type: none"> <li>• <i>wsem</i> and <i>rsem</i> set</li> <li>• writers queue on <i>wsem</i></li> </ul>
Both readers and writers with read first	<ul style="list-style-type: none"> <li>• <i>wsem</i> set by reader</li> <li>• <i>rsem</i> set by writer</li> <li>• all writers queue on <i>wsem</i></li> <li>• one reader queues on <i>rsem</i></li> <li>• other readers queue on <i>z</i></li> </ul>
Both readers and writers with write first	<ul style="list-style-type: none"> <li>• <i>wsem</i> set by writer</li> <li>• <i>rsem</i> set by writer</li> <li>• writers queue on <i>wsem</i></li> <li>• one reader queues on <i>rsem</i></li> <li>• other readers queue on <i>z</i></li> </ul>
