Lars Paulin Institute of Biotechnology University of Helsinki

# Institute of Biotechnology

- <http://www.biocenter.helsinki.fi/bi/>
- Independent Research Unit of the University of Helsinki
- About 300 people
- 30 Research groups

- Research Programs :

- Developmental Biology
- Cellular Biotechnology
- Structural Biology and Biophysics

- Director's Laboratory

- Core Facilities :

- NMR Laboratory
- Electron Microscopy
- Protein Chemistry
- DNA Sequencing and Genomics Laboratory
- Transgenic unit
- Light Microscopy unit

# DNA Sequencing and Genomics Laboratory

Cultivator 2, Viikinkaari 4

- Started in 1990 with DNA Synthesis
- 1991 DNA Sequencing
- 1994 EU Yeast Genome Project
- 1999 - 2000 High-throughput pipeline
- 1999 – 2002 Five EST Sequencing Projects
- 2000 Microarray Laboratory
- 2003 First Microbe Genome Project
  - Move together with Microarray Laboratory to Cultivator 2
- 2006 Genome Sequencer 20, 2007 FLX
- 2008 DNA Sequencing and Genomics Laboratory
  
- Core Facility
  - Service DNA sequencing and whole projects
  - Collaborative projects
    - "Research hotel"
  - Develop high-throughput methods
  - Consulting

# Short History of DNA Sequencing

- 1977
  - Maxam-Gilbert
  - Sanger
- 1986
  - First Automated DNA Sequencer ABI 370 (373)
- 1988
  - Pharmacia ALF
- 1995
  - ABI 377
    - Up to 96 lanes
- 1996
  - First Capillary DNA Sequencer ABI 310
- 1998
  - First 96 Capillary instruments MegaBace, ABI 3700
- 2000
  - ABI 3100, 16 Capillary
- 2002
  - ABI 3730, 48 or 96 Capillary
- 2005
  - Genome Sequencer GS20
- 2006
  - Solexa (Illumina)
- 2007
  - SOLiD

# Sanger DNA Sequencing

## 1. Template

- ssDNA or dsDNA

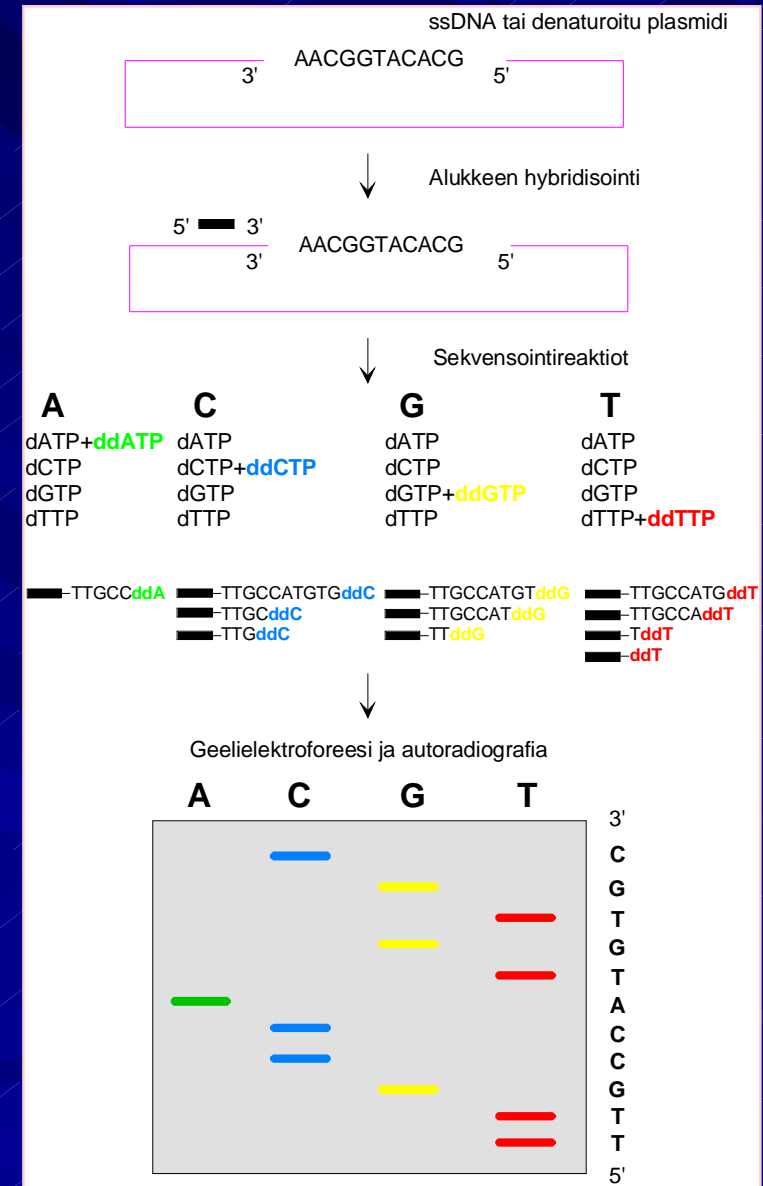

## 2. Primer annealing

- Sequencing primer

## 3. Elongation

- DNA polymerase
- Steps 2 and 3 can be done repeatedly => cycle sequencing

## 4. Electrophoresis

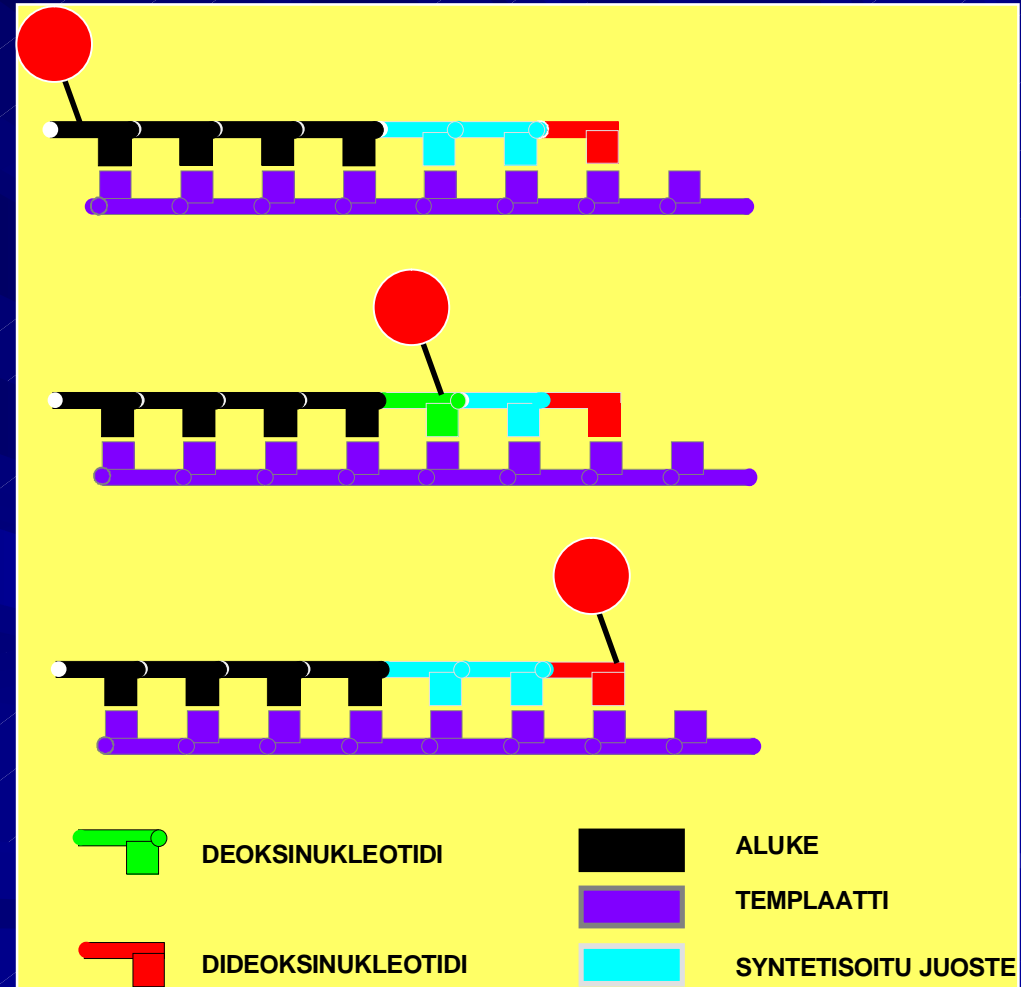

# Incorporating Labels

Labelled primers  
•1 or 4 labels

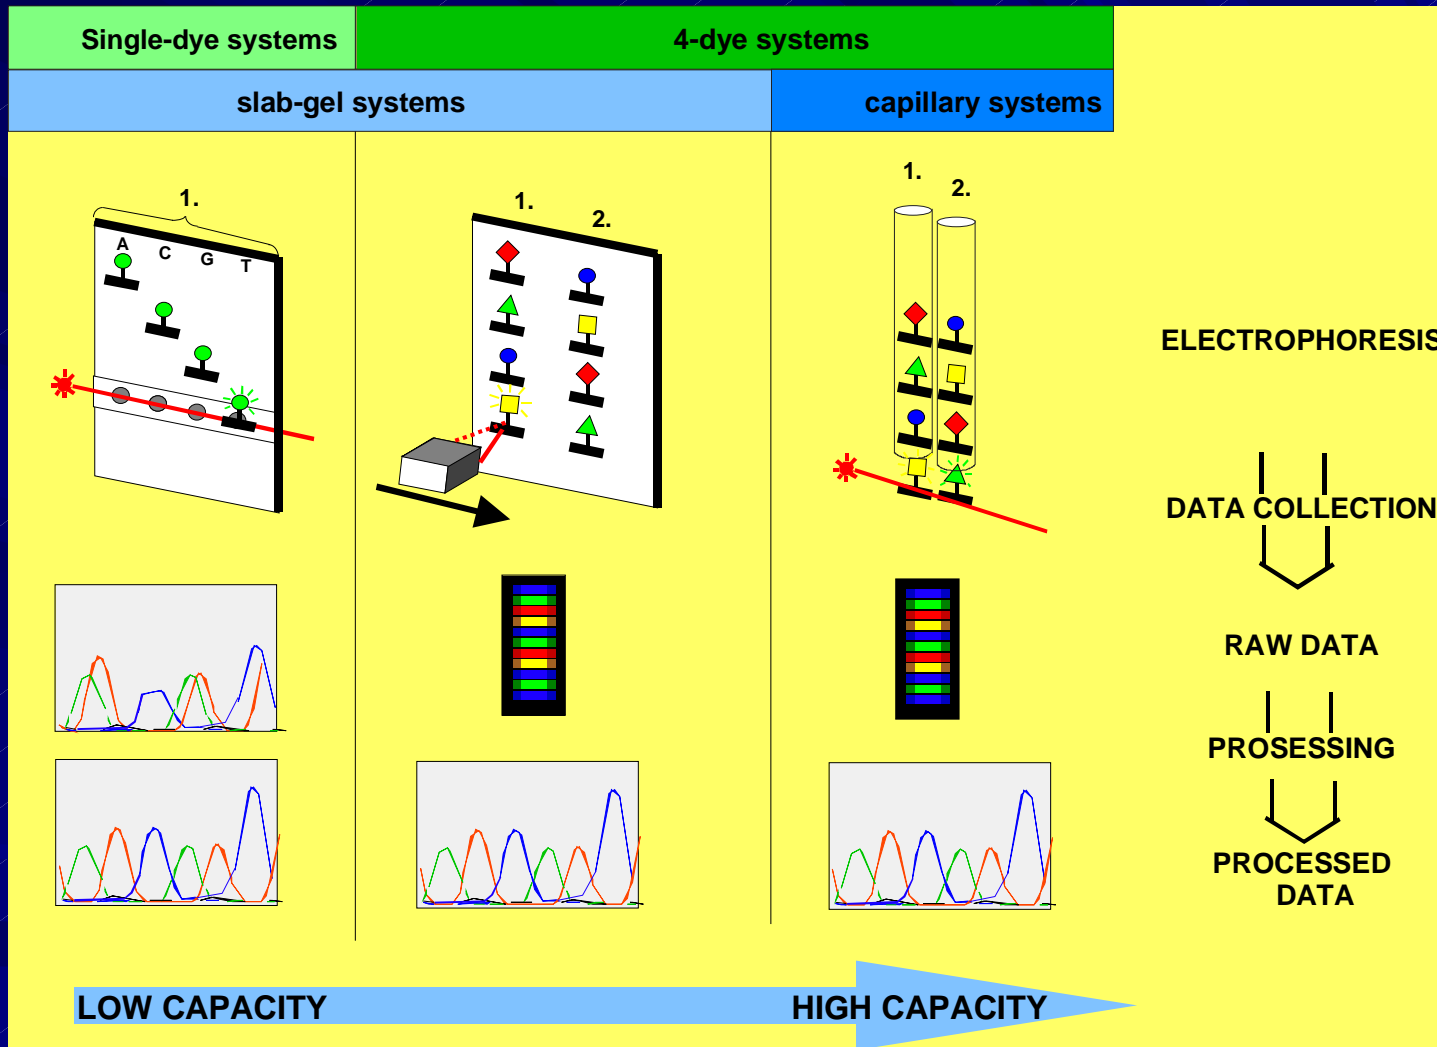

Labelled deoxynucleotides  
•1 label

Labelled  
dideoxynucleotides  
•1 or 4 labels  
•BigDye, ET  
terminators

# Automated DNA Sequencing

Sarén, A-M *et.al.* Kemia-Kemi 1996, 23, 724-727

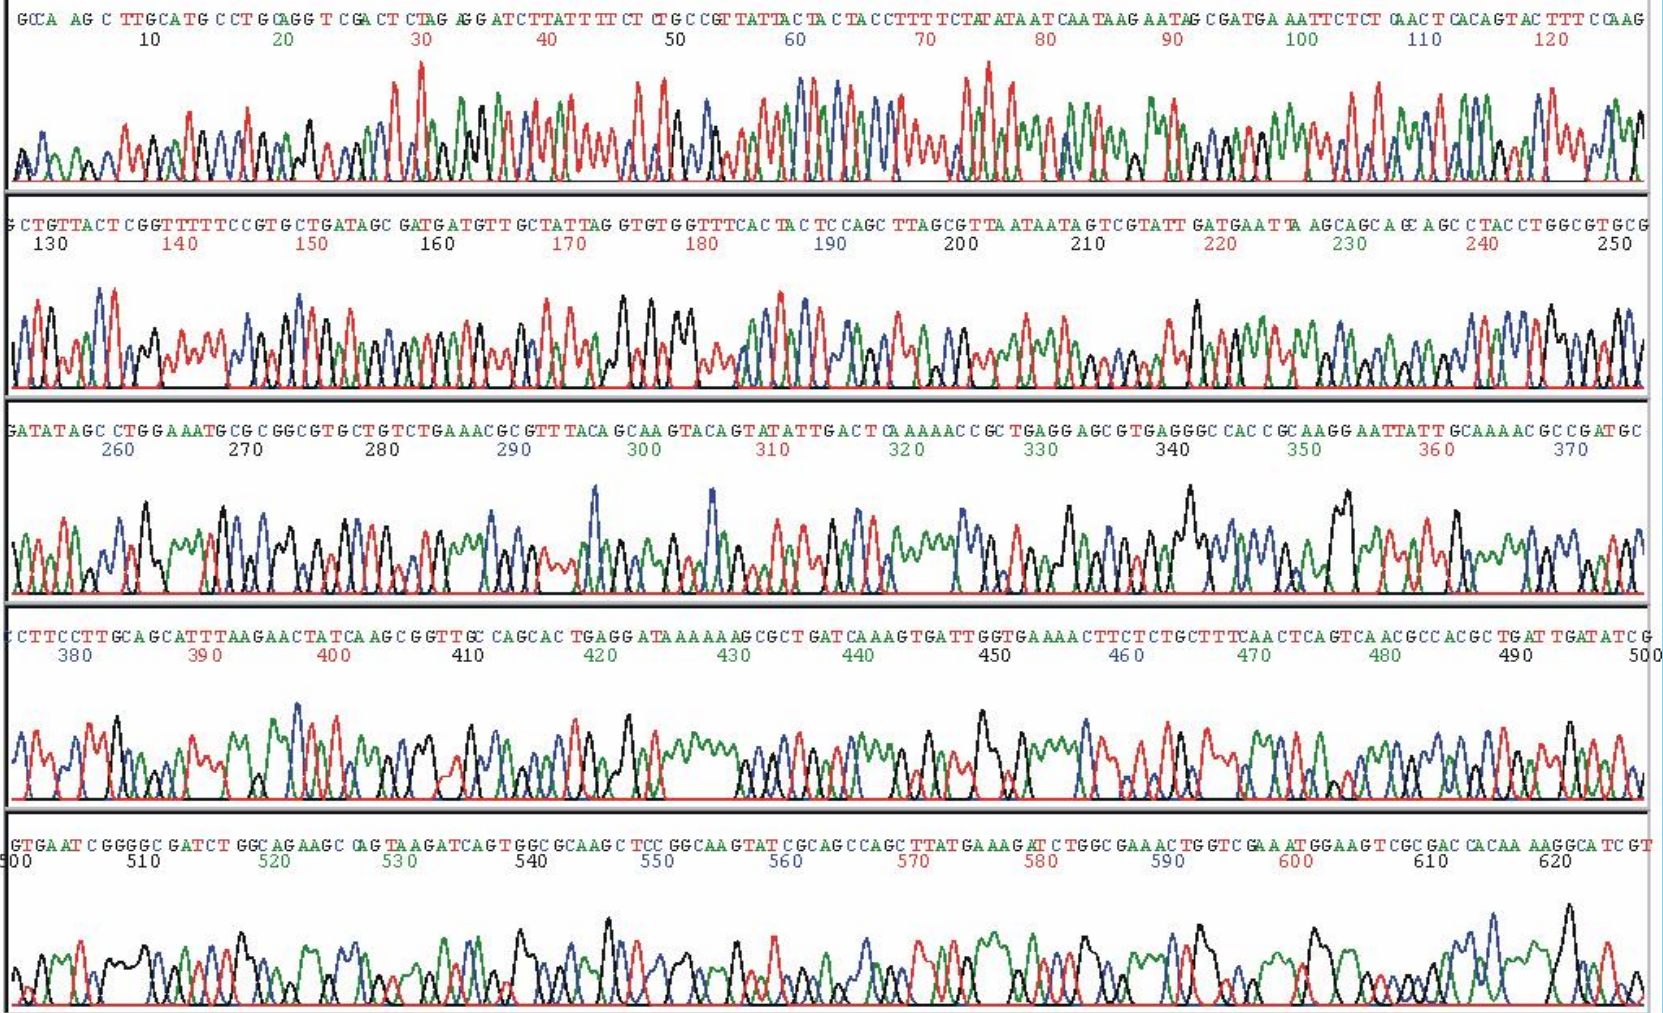

Lars Paulin Institute of Biotechnology University of Helsinki

# Strategies for Genome Sequencing

## ■ Shotgun approach

- random sequencing of different sized libraries
- assembly using different software
- closing of gaps using different methods

## ■ Libraries

- usually made by random shearing of genomic DNA
- 2 kb, 4-6 kb, 10 kb plasmid libraries
- fosmid or cosmid libraries with 30 - 50 kb inserts

# Whole Genome Shotgun Sequencing

Whole Genome:  
~ 3 Mb

Sheared DNA:  
~ 2 kb

Sequencing  
Templates

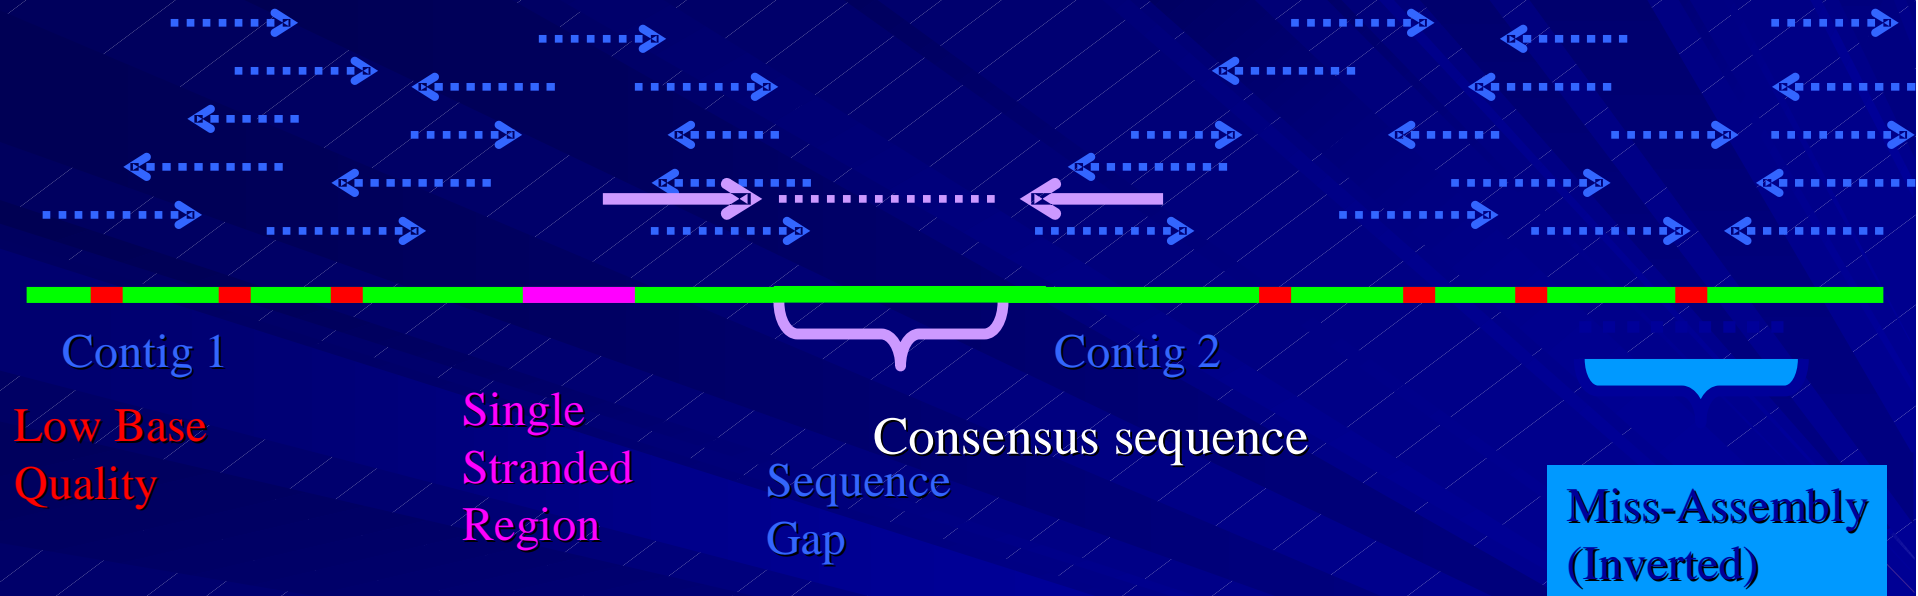

Random  
Reads  
Both ends

# Shotgun Sequencing :ASSEMBLY

• 0.5 -1.0 X (2 reads/kb) - 'Skimming'

• 3.5 - 4.0 X (~9 reads/kb) - 'half-shotgun'

• 6.5 - 8.0 X (~18 reads/kb) - 'pre-finished'

• 10 X (22-24 reads/kb) - 'deep shotgun'

# Phred, Phrap and Staden Package Program

## Phred and Phrap

- University of Washington
- Phil Green, <http://www.phrap.org/>

## Phred quality score:

$$QV = - 10 * \log_{10}( P_e )$$

where  $P_e$  is the probability that the base call is an error.

Phred score	$P_e$	Accuracy of the base call
10	1 in 10	90%
20	1 in 100	99%
30	1 in 1,000	99.9%
40	1 in 10,000	99.99%
50	1 in 100,000	99.999%

## Staden Program

- Cambridge, Sanger Center
- Roger Staden, <http://staden.sourceforge.net/>
- Trace editing
- Phrap assembly and Gap4 editing
  - display of traces from sequencers
  - translations, orfs, RE etc.
  - good capacity

# New DNA Sequencing Technology

## Parallel Sequencing Technology

- Massive throughput
- Fast sequencing
- No cloning step
- PCR
  
- Currently three systems ready
  - Genome Sequencer (<http://www.454.com/>, <http://www.roche.com>)
    - 454 Life Sciences, Roche
    - Launched in October 2005
  - Solexa (<http://www.illumina.com>)
    - Illumina
    - Launched 2006
  - SOLiD (<http://www.appliedbiosystems.com>)
    - Applied Biosystems
    - Launched in October 2007

# Genome Sequencer

(<http://www.454.com/>, <http://www.roche.com>)

## ■ Genome Sequencer GS20;FLX

- Manufacturer 454 Life Science
- Marketing Roche

## ■ Parallel Sequencing

- Shotgun sequencing
  - No plasmid libraries
  - Linkers ligated to fragments
  - Emulsion PCR
  - Picotiter plate, 1 600 000 wells
- Pyrosequencing

(Nyren, P. et al Anal Biochem. 1993, 208,171-5)

- Detection with sensitive CCD camera
- Run time ca. 4,5 h; 7,5 h
- Read lenght 100 -120 bp; 250 – 300 bp
- Raw sequence ca. 25 – 35 Mb/run; 80 – 100 Mb/run

# Genome Sequencer GS 20/FLX

DNA Library Preparation

emPCR

Sequencing

emPCR

Sequencing

## DNA Library Preparation

1. DNA fragmentation
2. Fragment end polishing
3. Adaptor ligation
4. Library immobilisation
5. Fill-in reaction
6. Single-stranded template DNA (sstDNA) library isolation
7. sstDNA library quality assessment and quantitation

## Emulsion PCR Amplification

1. Preparation of the live amplification mix
2. sstDNA library capture
3. Emulsification
4. Amplification
5. Bead recovery
6. sstDNA library bead enrichment
7. Sequencing primer annealing

## Sequencing/ Genome Sequencer 20 Operation

1. The pre-wash Run
2. PicoTiterPlate™ preparation
3. The PREP Run
4. The Sequencing Run

## Output

1. FASTA file
2. Assembly
3. Mapping

# Library preparation

**DNA Library Preparation and Titration**

**emPCR**

**Sequencing**

4.5 hours

10.5 hours

8 hours

5.5 hours

**gDNA**

**sstDNA library**

- Genome fragmented by nebulization
- No cloning; no colony picking
- sstDNA library created with adaptors. The adaptors are used as primers, and for binding to beads.
- A/B fragments selected using streptavidin-biotin purification

# Emulsion PCR

DNA Library Preparation and Titration

4.5 hours

10.5 hours

emPCR

8 hours

Sequencing

5.5 hours

Anneal sstDNA to an excess of DNA Capture Beads

Emulsify beads and PCR reagents in water-in-oil microreactors

Clonal amplification occurs inside microreactors

Break microreactors, enrich for DNA-positive beads

sstDNA library

Clonally-amplified sstDNA attached to bead (millions of copies per bead)

# PicoTiterPlate (PTP)

DNA Library Preparation and Titration

4.5 hours

10.5 hours

emPCR

8 hours

Sequencing

5.5 hours

- Well diameter: average of 44  $\mu\text{m}$
- A single clonally amplified sstDNA bead is deposited per well
- 200,000 reads obtained in parallel on large-format PicoTiterPlate device

Amplified sstDNA library beads

Quality reads

# Pyrosequencing

Adaptor Taq TCAG -- CTGA

# Genome Sequencer GS20/FLX

Help

# Flowgram

1. Raw data is series of images

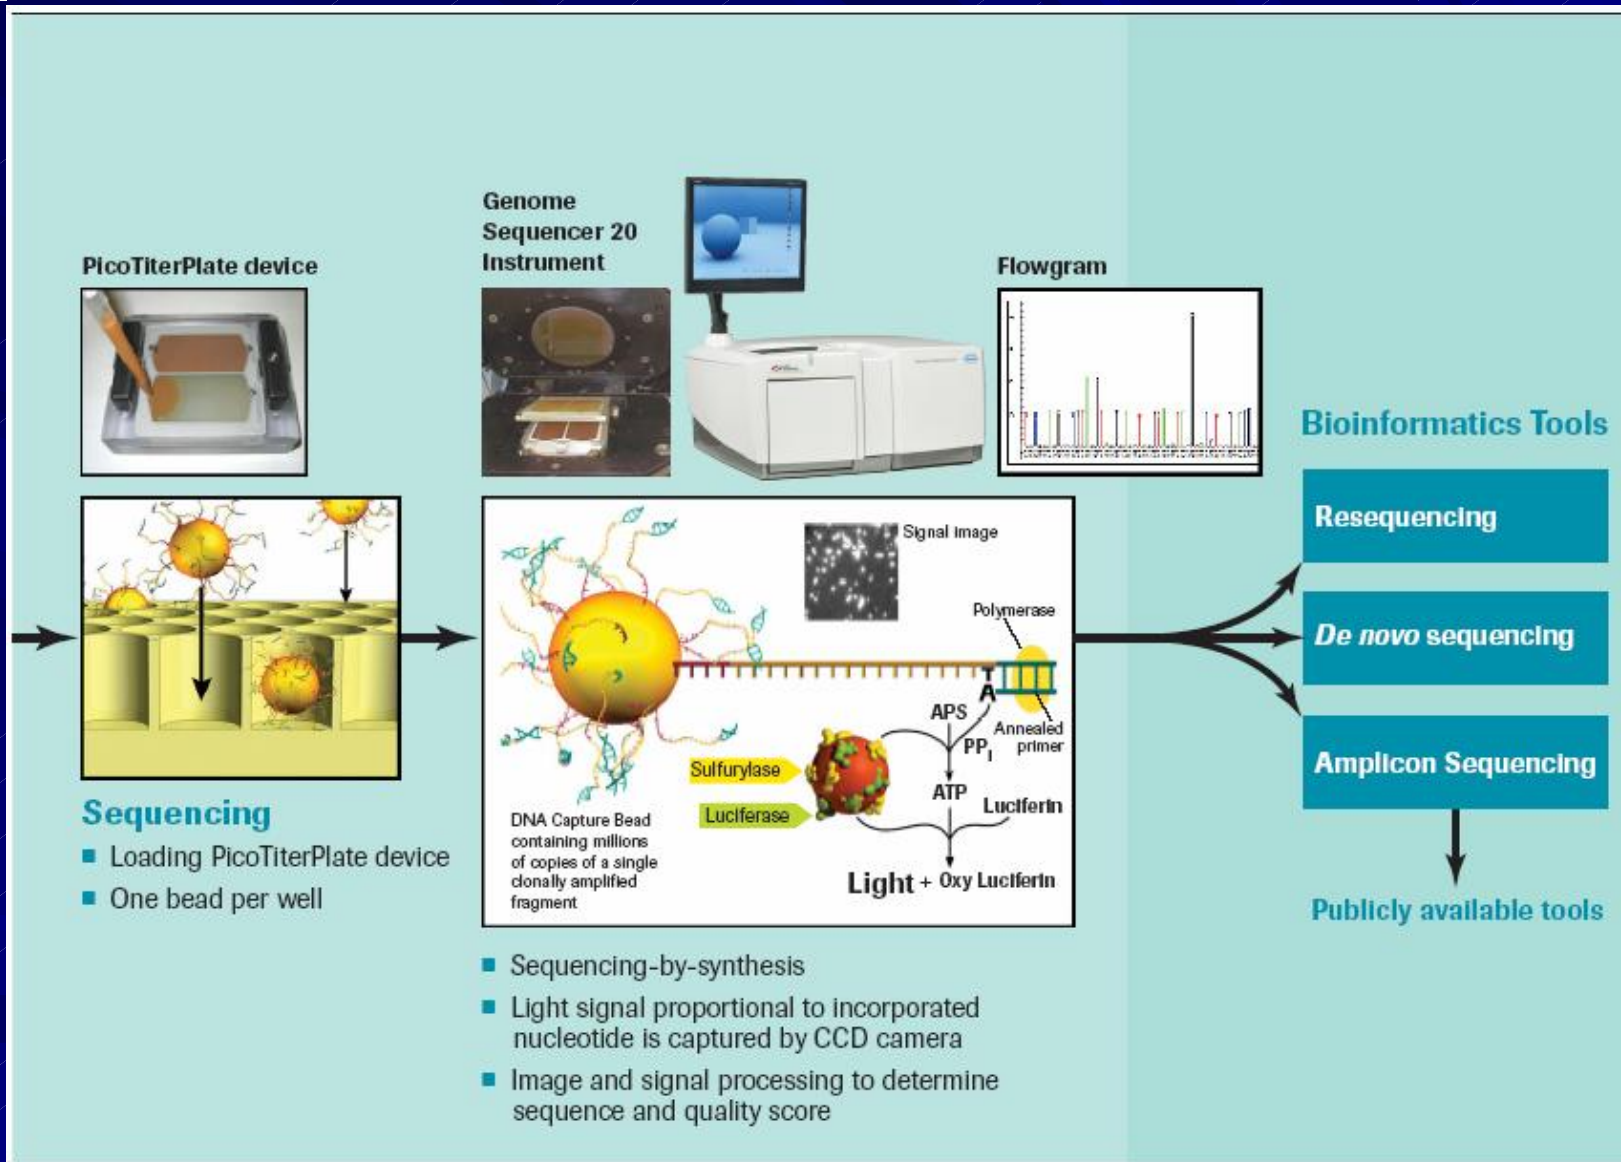

2. Each well's data extracted, quantized and normalized

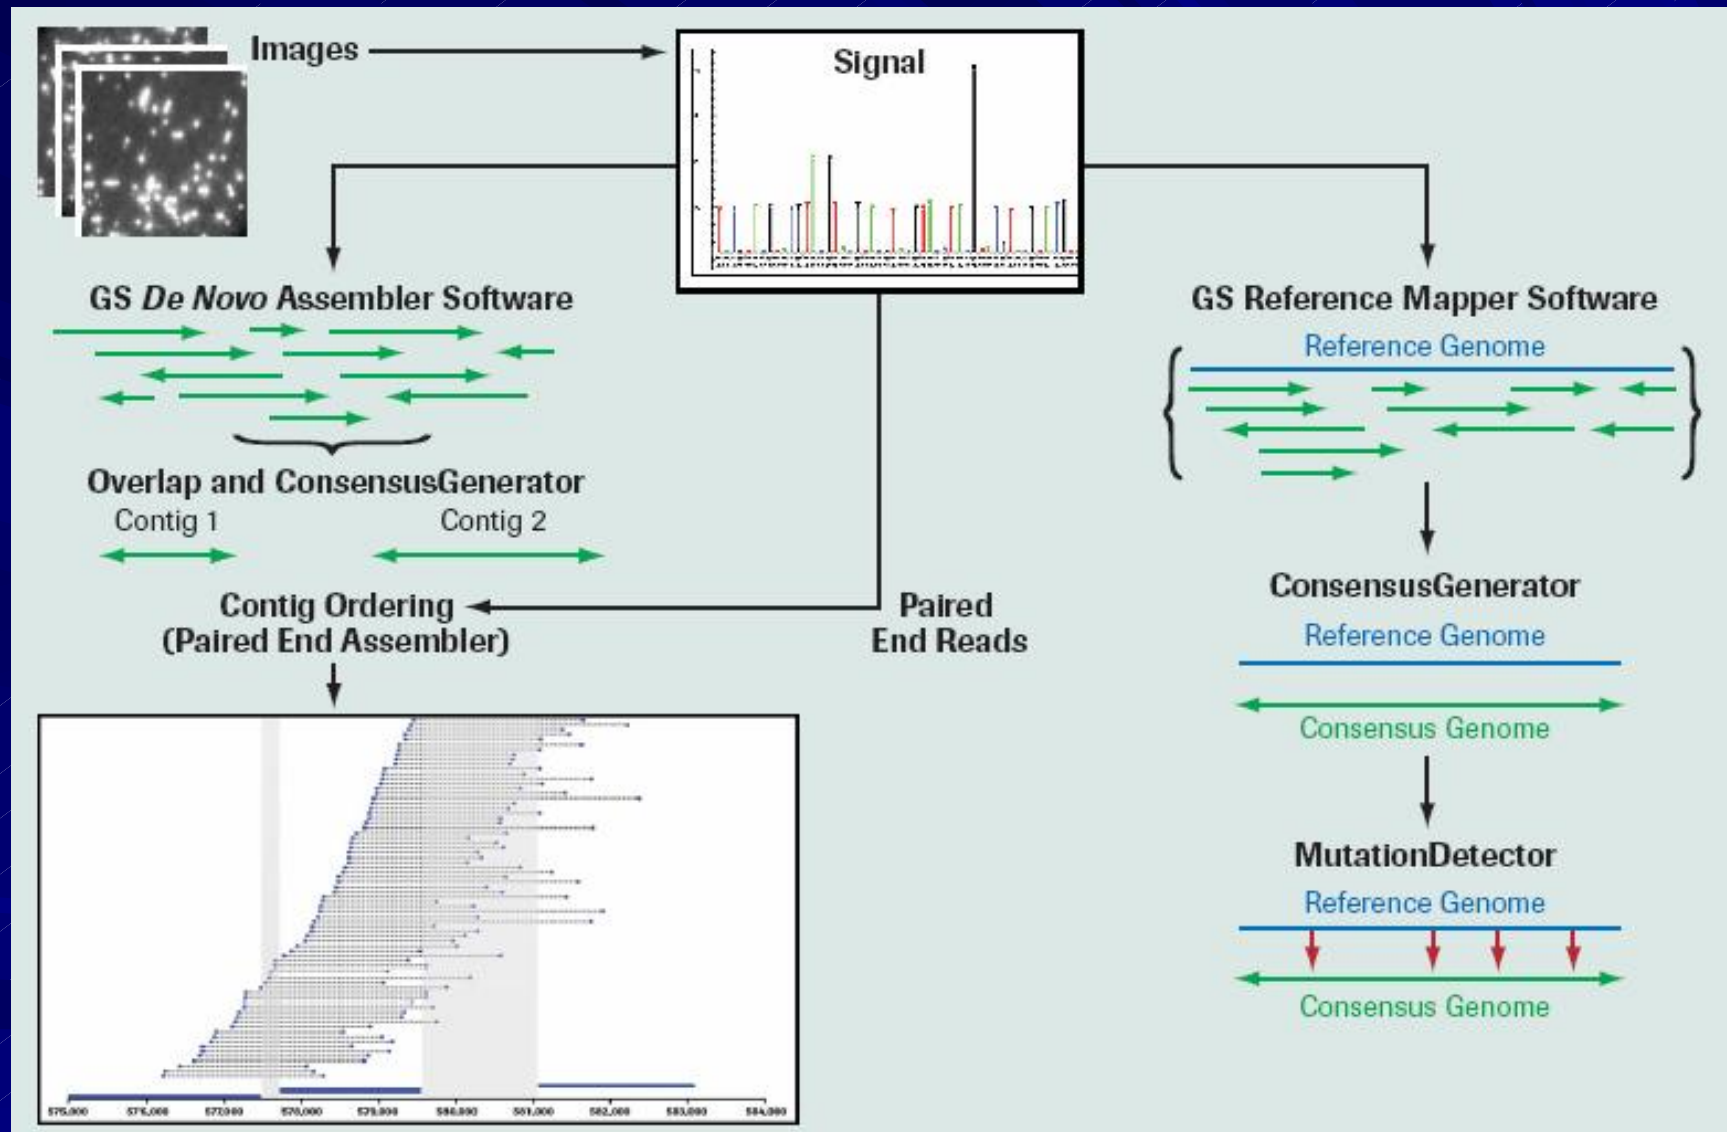

3. Read data converted into "flowgrams"

Adaptor Taq TCAG -- CTGA

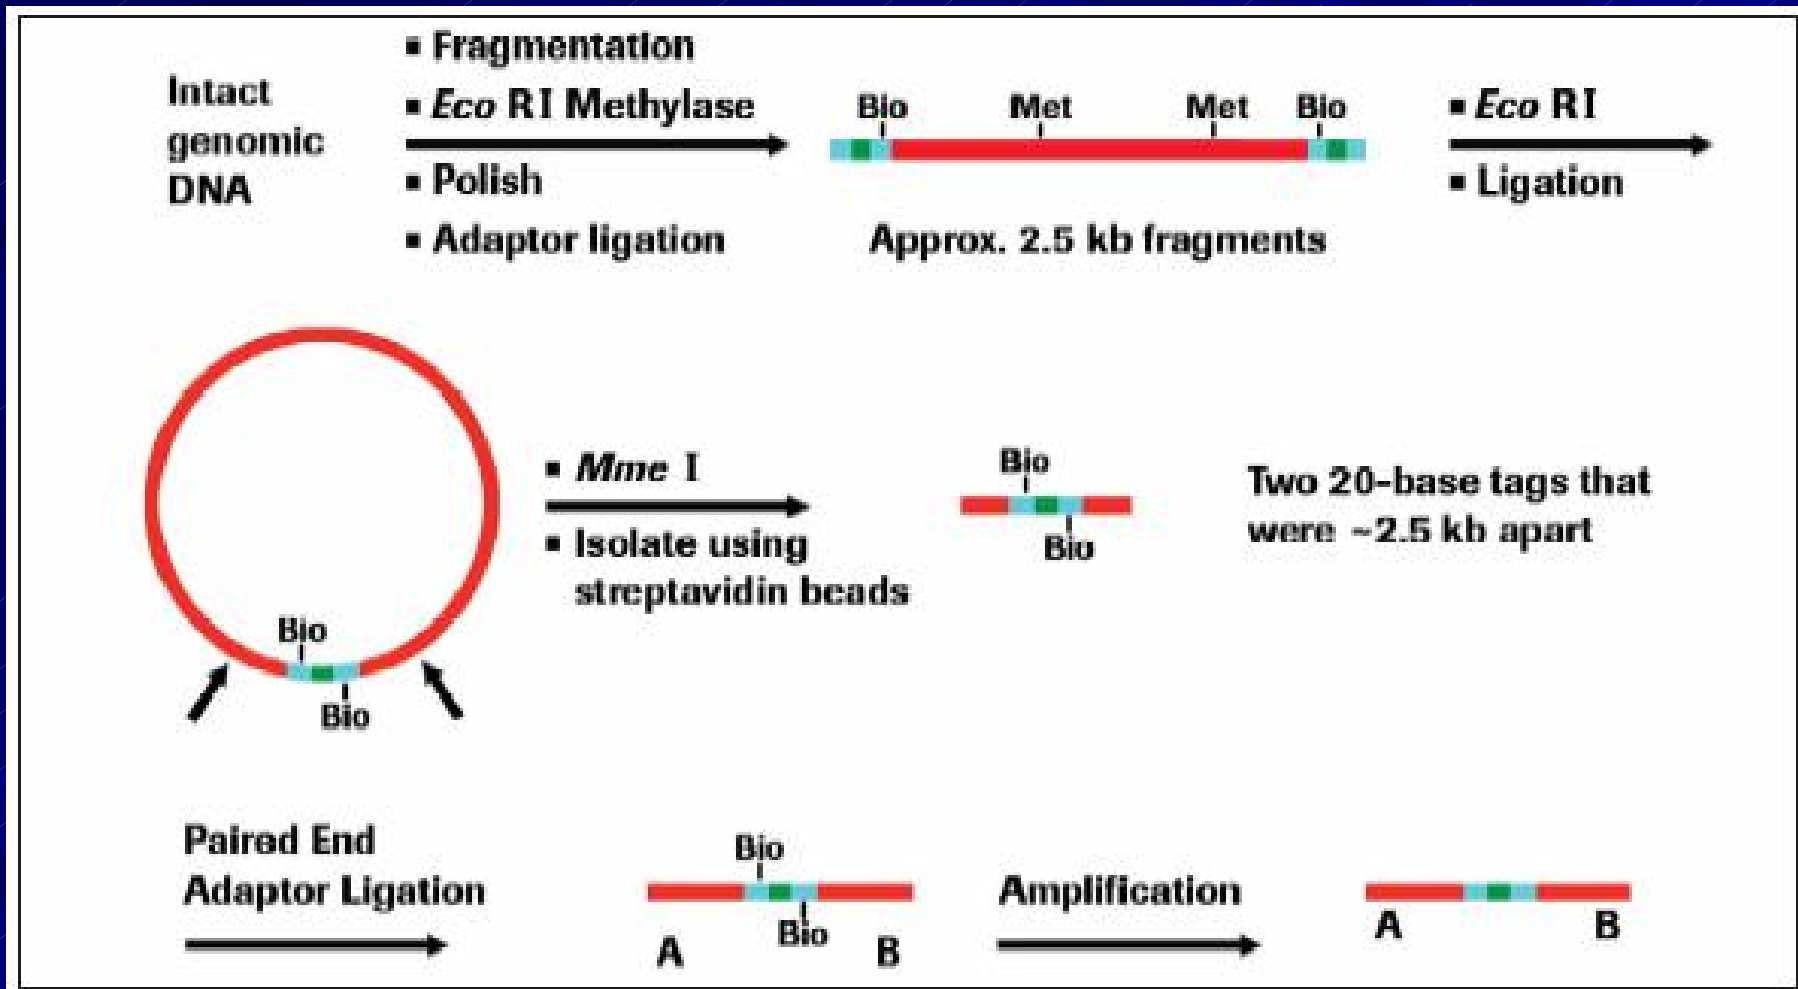

# Amplicon sequencing

# Paired-end Sequencing

# Illumina/Solexa Genome Analyzer

(<http://www.illumina.com>)

## ■ Clonal Single Molecule Array technology

- Sequencing-by-synthesis technology
- Reversible terminator-based sequencing
  - removable fluorescence
- Flow cell with  $> 10$  million clusters
  - Each cluster  $\sim 1,000$  copies of template / $\text{cm}^2$
- 1–8 samples / run
- 3 laser system (660, 635, and 532 nm)
- Read length 35 - 50 bp, 1- 2 Gb / run
  - Run time 3 – 6 days,

Flow cell

Cluster Station

# Illumina/Solexa

# Illumina/Solexa sequencing

## Sequencing

- First bases
- Fluorescent reversible terminators
- Detection with laser and CCD camera

## Sequencing

- Second bases detected after removal of label and blocking

# SOLiD, Applied Biosystems

(<http://www.appliedbiosystems.com>)

## ■ Sequencing by Ligation

- emPCR
  - Small beads, 1 $\mu$ m
- Attaching to glass slides
- Labelled probes
  - Fluor colours
  - 2 base encoding system
- Repeated ligation steps
- Detection with 4 Mpixel camera
- Read length 25-30 bp
- 1-2 slides / run
- 1-2 Gb / run
- Run time 5 -10 days

Shendure, J. *et.al.* Science 2005, 309, 1728-1732

SOLiD

Lars Paulin Institute of Biotechnology University of Helsinki

## Sequential rounds of sequencing Multiple cycles per round

# SOLiD

AB Applied Biosystems

## Summary of decoding

# Applications

- Whole genome sequencing
  - *de novo* sequencing
    - Genome Sequencer FLX
- Comparative sequencing
  - All three systems
- Metagenomics
  - Genome Sequencer FLX
- Amplicon sequencing
  - Mutations / SNP
  - All three systems
- Transcriptome sequencing
  - cDNA
    - All three systems
  - Small RNA
    - All three systems
- ChIP sequencing
  - All three systems
- Methylation sequencing
  - All three systems

# Helicos

([www.helicosbio.com](http://www.helicosbio.com))

## ■ HeliScope™ Single Molecule Sequencer

- True Single Molecule Sequencing (tSMS)™
- Sequencing-by-synthesis
- Template 100 – 200 bp
  - Addition of polyA
- No PCR amplification
- 1 000 000 000 reads / experiment
- 25-90 Mb / h
- 2 + Gb / day

**World's First Single Molecule Genetic Analyzer**  
*The HeliScope™ System*

**Initial throughput is planned to range from 25 to 90 million bases of DNA per hour**

- ❑ Imaging capacity of the instrument is ~1 Billion bases per hour
- ❑ Improvements to the tSMS chemistry and the flow cells will provide customers significant performance gains

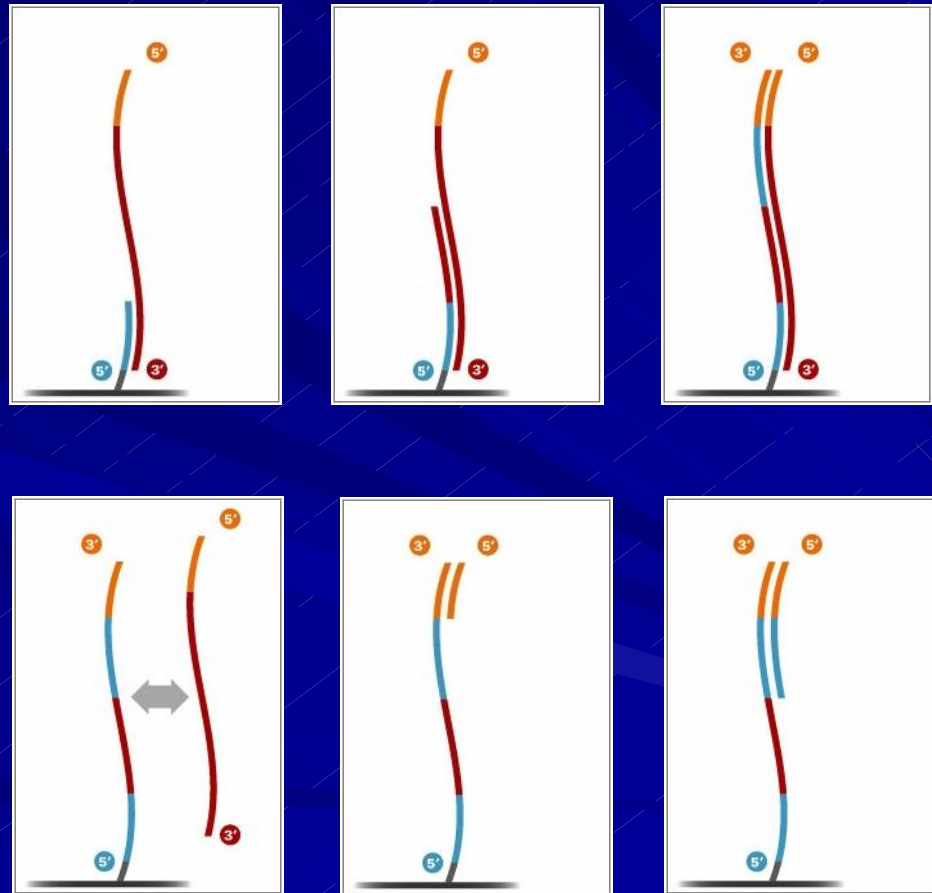

# Helicos

## Flow cell

- 25 discrete channels per flow cell
- Single molecule capture by hybridization, allowing densities of 100 million strands of DNA per square centimeter or higher

## Paired-end Sequencing (100 – 200 bp)

# VisiGen

([www.visigenbio.com](http://www.visigenbio.com))

## Technology

- No cloning or amplification
- Intact DNA fragments
- Real-time detection of DNA synthesis, FRET
- Fluorescent donor on tip of the Polymerase attached on a glass slide
- Acceptor fluorescent moiety on the nucleotides
  - On the gamma-phosphate
- 1Mb/sec/machine

Lars Paulin Institute of Biotechnology University of Helsinki

(Korlach, J. *et.al.* PNAS 2008, 105, 1176-81, Levene, MJ. *et.al.* Science 2003, 299, 682-86)

## Technology

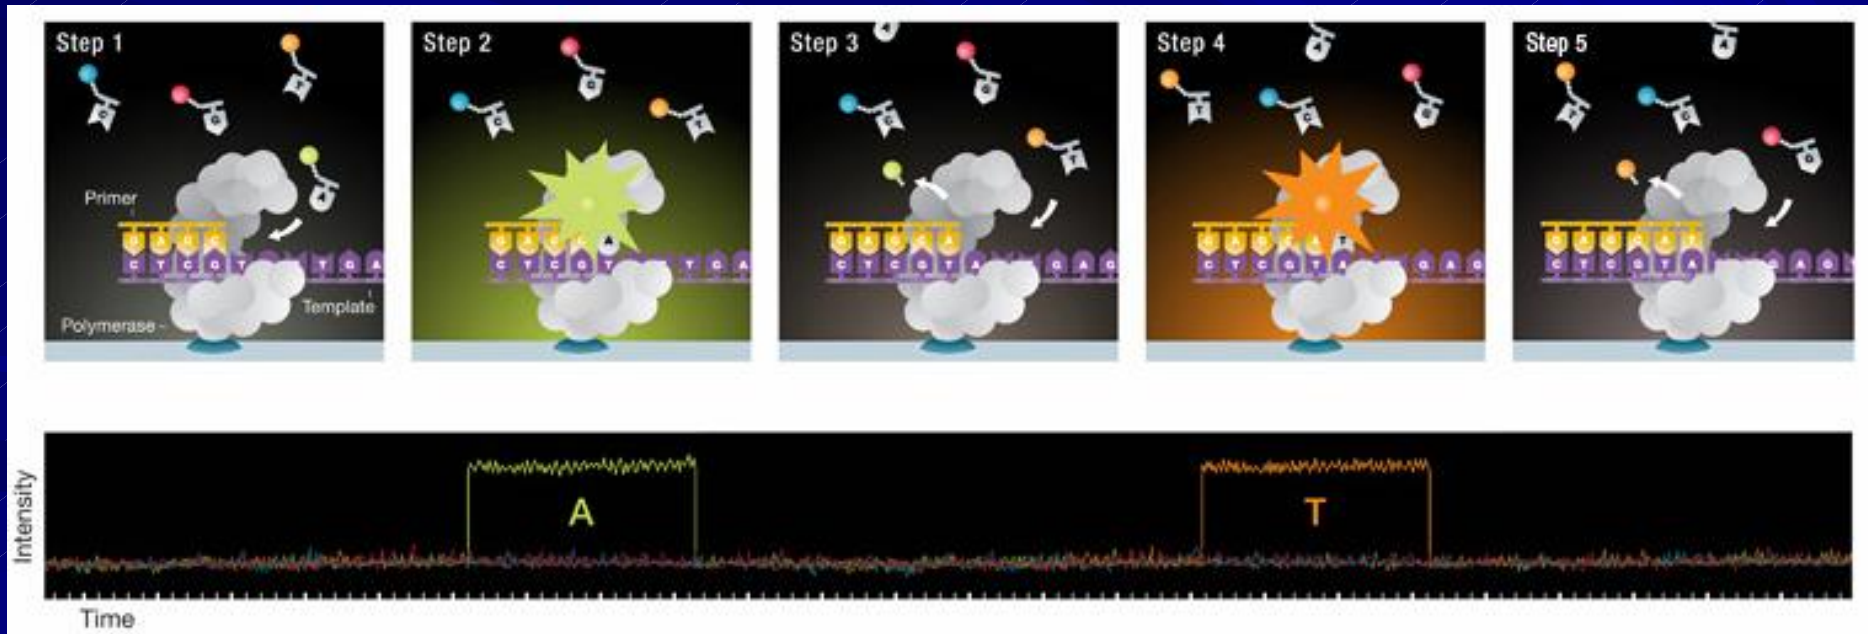

- Single-Molecule Real-Time (SMRT) DNA sequencing technology
- SMRT chip
  - Thousands of zero-mode waveguides (ZMWs)
  - Holes 100 nm metal film, 20 zeptoliters ( $10^{-21}$  liters)
- Real-time detection of DNA synthesis
  - Fluorescent dNTPs

# SMRT chip

([www.genomics.xprize.org/genomics](http://www.genomics.xprize.org/genomics))
