

### **Logging in to system**

You have to give the administrator (admin) password in order to log in to the system.

### **Creating a tournament**

Give the required information. You will get an error message if information is missing.

### **Managing tournaments**

The tournament data will be saved into tournament\_X.xml file. This file will be located in the Data folder of the project.

Delete: Will delete the whole tournament. This will also delete the tournament file.

### **Player registration**

Typing the player name into the familyname field will give the names from the pre-entry list. If no name is given type the required information.

### **Wiki-import**

Copy/paste the information from of the players from the current wiki registration system and press import. This will add the players to the tournament.

### **Export to pairing software**

Export data will display the registered players in the McMahan format. This can be copy/pasted to a text editor and saved. This file can then be imported into McMahan through McMahan's interface.

### **Pre-registration**

The short form of the address is: [http://.../GoTournaments?tid=tournament\\_ID](http://.../GoTournaments?tid=tournament_ID)"
