

## UML2015 Information

At the end of the course 50% of points is needed to pass the course, while the total amount of points from the exam is 100%. By doing all exercises you can gain 15% extra points (and interpolated amounts if not all are done), which will be added to the points from the exam. So the maximum amount of points from the course is 115%.

The exercise points are earned by being present in the exercise sessions, and being prepared to explain your solutions to the others on the board. To some exercises model solutions will come available on the web page during the course.
