

ADA Protected Object Solution

```
...  
private portions := 0  
...  
protected body pot is  
    entry into_pot when portions < H is  
        begin  
            portions=portions+1; fill_pot()  
        end deposit_into_pot;  
  
    entry wait_full when portions == H is  
        begin # empty body  
        end wait_full;  
  
    procedure empty_pot is  
        begin  
            portions = 0;  
        end empty_pot;  
end pot;
```

```
process bee [i=1 to N] {  
    while (true) {  
        collect_honey();  
        pot.into_pot,  
    }  
} # not Ada syntax
```

```
process bear() {  
    while (true) {  
        pot.wait_full;  
        eat_honey();  
        pot.empty_pot,  
    }  
} # not Ada syntax
```

What if lots of bees (>> H) waiting in *into_pot*?

How to modify to do fill_pot() in parallel??
