RTD-Log
19. meeting 20.3.01 12:15 - 14:00 in C475
Minutes

Present: Matti Johansson, Juha Saarelainen,
Minna Vasankari, Dan Patrick Doepel,
instructor Mika Karlstedt,
customer Tiina Niklander
Absent: Marko Moisio

Topics:

- Testing module's co-operation with other modules could be discussed in the testing section of each module.
- Debug information could be printed both to a file and to stdout. This is discussed later.
- A new global variable is added which tells if there are both complete image and an index-write-mark in the active file.
- Tiina came to answer our questions. She gave us a paper which describes the data object's internal structure. The structure of the whole log record is described in file ftrs.h. We decided to handle the log record in struct format. A global function is written which gets the struct as a parameter and returns the time stamp from the struct's data object.
- Whether the buffer semaphore should block is given to the BUF_read interface function as a parameter.
- Tiina will be away from the department 11.3-25.3.
- We will probably prepare a poster for the Open Doors Day which is on 6.4. Maybe even a demo but that could be quite difficult. At least we should prepare to answer other students' questions about software engineering projects and what it is like to do one for a research group of the department.
- Tiina promised to read our Thursday noon version of the document by next Tuesday and give comments to it.

The next meeting is on Friday 23.3. at 12:15.
