Course Overview

• Overlay networks and peer-to-peer technologies have become key components for building large scale distributed systems.

• This course will introduce overlay networks and peer-to-peer systems, discuss their general properties, and applications. The course will cover the following topics:
  – Currently deployed peer-to-peer systems and how they work
  – Distributed Hash Tables as a base for structured peer-to-peer systems
  – Peer-to-peer storage systems
  – Performance issues, legal aspects, and privacy issues
  – Peer-to-peer content distribution algorithms
General Info

Advanced course, 4 credits

The course replaces the P2P Networks course
You cannot take this course if you took the old course

Requirements: basics of networking

Assignments/exercises done as group work (1-3 persons),
idea is to keep the same group structure (but do tell about freeriders!)
Lectures

• Lectures
  – Monday 12-14 in D122 19.09-12.10.
  – Wednesday 12-14 in D122 21.09-12.10.

• Assignments
  – Wednesday 10-12 D122 21.09-12.10.
    – First session on 28.9.
    – Assignment topic given one week before, done for the next assignment session.

• Course based on book
Introduction
Overview
Overlay Technology
Applications
Properties of Data
Structure of the Book

Network Technologies
Networking
Firewalls and NATs
Naming
Addressing
Routing
Multicast
Network Coordinates
Network Metrics

Properties of Networks and Data
Data on the Internet
Zipf’s Law
Scale-free Networks
Robustness
Small Worlds

Unstructured Overlays
Overview
Early Systems
Locating Data
Napster
Gnutella
Skype
BitTorrent
Cross-ISP BitTorrent
Freenet
Comparison

Foundations of Structured Overlays
Overview
Geometries
Consistent Hashing
Distributed Data Structures for Clusters

Distributed Hash Tables
Overview
APIs
Plaxton’s Algorithm

Chord
Pastry
Koorede
Tapestry
Kademlia
Content Addressable Network
Viceroy
Skip Graph
Comparison

Probabilistic Algorithms
Overview of Bloom Filters
Bloom Filters
Bloom Filters in Distributed Computing
Gossip Algorithms

Content-based Networking and Publish/Subscribe
Overview
DHT-based Data-centric Communications
Content-based Routing
Router Configurations
Siena and Routing Structures
Hermes
Formal Specification of Content-based Routing Systems
Pub/sub Mobility

Security
Overview
Attacks and Threats
Securing Data
Security Issues in P2P Networks
Anonymous Routing
Security Issues in Pub/Sub Networks

Applications
Amazon Dynamo
Overlay Video Delivery
SIP and P2PSIP
CDN Solutions

Conclusions

Index
Lectures

26.9. Unstructured Networks continued.
3.10. Structured networks.
5.10. Distributed Hash Tables (DHTs)
10.10. DHTs continued.
12.10. Applications
Grading

Course grading will be based on the final exam and the assignments.

The exam will be held on 19.10. 16-19 in A111.
Assignments/Exercises

- Assignments are given about one week before the session, due date is the day before the assignment session 4pm
- Assignments can be done in a group (or alone), groups can change between assignments
- Assignments give bonus points for the exam
  - Max 20%
- Wednesdays 10-12 D122 27.09-15.10.
  - 28.9. General questions and BitTorrent
  - 5.10. DHT questions
  - 12.10 DHT, security, and reliability questions
