

**Table 2.1 Sample Program Execution Attributes**

	<b>JOB1</b>	<b>JOB2</b>	<b>JOB3</b>
<b>Type of job</b>	Heavy compute	Heavy I/O	Heavy I/O
<b>Duration</b>	5 min	15 min	10 min
<b>Memory required</b>	50 K	100 K	80 K
<b>Need disk?</b>	No	No	Yes
<b>Need terminal?</b>	No	Yes	No
<b>Need printer?</b>	No	No	Yes

**Table 2.2 Effects of Multiprogramming on Resource Utilization**

	<b>Uniprogramming</b>	<b>Multiprogramming</b>
<b>Processor use</b>	22%	43%
<b>Memory use</b>	30%	67%
<b>Disk use</b>	33%	67%
<b>Printer use</b>	33%	67%
<b>Elapsed time</b>	30 min	15 min
<b>Throughput rate</b>	6 jobs/hr	12 jobs/hr
<b>Mean response time</b>	18 min	10 min

**Table 2.3 Batch Multiprogramming versus Time Sharing**

	<b>Batch Multiprogramming</b>	<b>Time Sharing</b>
Principal objective	Maximize processor use	Minimize response time
Source of directives to operating system	Job control language commands provided with the job	Commands entered at the terminal

**Table 2.4 Operating System Design Hierarchy**

<b>Level</b>	<b>Name</b>	<b>Objects</b>	<b>Example Operations</b>
13	Shell	User programming environment	Statements in shell language
12	User processes	User processes	Quit, kill, suspend, resume
11	Directories	Directories	Create, destroy, attach, detach, search, list
10	Devices	External devices, such as printers, displays, and keyboards	Open, close, read, write
9	File system	Files	Create, destroy, open, close, read, write
8	Communications	Pipes	Create, destroy, open, close, read, write
7	Virtual memory	Segments, pages	Read, write, fetch
6	Local secondary store	Blocks of data, device channels	Read, write, allocate, free
5	Primitive processes	Primitive processes, semaphores, ready list	Suspend, resume, wait, signal
4	Interrupts	Interrupt-handling programs	Invoke, mask, unmask, retry
3	Procedures	Procedures, call stack, display	Mark stack, call, return
2	Instruction set	Evaluation stack, microprogram interpreter, scalar and array data	Load, store, add, subtract, branch
1	Electronic circuits	Registers, gates, buses, etc.	Clear, transfer, activate, complement

Shaded area represents hardware.

**Table 2.5 Some Areas Covered by the Win32 API [RICH97]**

Atoms	Networks
Child controls	Pipes and mailslots
Clipboard manipulations	Printing
Communications	Processes and threads
Consoles	Registry database manipulation
Debugging	Resources
Dynamic link libraries (DLLs)	Security
Event logging	Services
Files	Structured exception handling
Graphics drawing primitives	System information
Keyboard and mouse input	Tape backup
Memory management	Time
Multimedia services	Window management

**Table 2.6 NT Microkernel Control Objects [MS96]**

Asynchronous Procedure Call	Used to break into the execution of a specified thread and to cause a procedure to be called in a specified processor mode.
Interrupt	Used to connect an interrupt source to an interrupt service routine by means of an entry in an Interrupt Dispatch Table (IDT). Each processor has an IDT that is used to dispatch interrupts that occur on that processor.
Process	Represents the virtual address space and control information necessary for the execution of a set of thread objects. A process contains a pointer to an address map, a list of ready thread containing thread objects, a list of threads belonging to the process, the total accumulated time for all threads executing within the process, and a base priority.
Profile	Used to measure the distribution of run time within a block of code. Both user and system code can be profiled.
